

IPTABLET

IPTablet is a new interactive device designed to promote mutual communication between the presenters and the audiences. Wirelessly connected to the PC and the IPBOARD, IPTablet empowers teachers to teach from anywhere in the classroom. It's a perfect device to promote maximum interactivity and mobility for classroom teaching and business presentation.

Features:

- 1 Control software applications, write, draw, and highlight information wirelessly.
- 2 Allows for digital sketching, handwriting, annotating, and editing from multiple places in a room.
- 3 Cluster working between tablet for Teachers and Students, provides instant collaboration between teachers and students via shared control of digital content.
- 4 Integrated with voting features for real-time testing, empowers all participants to contribute their ideas in a free and direct way.
- 5 Precise and lightweight wireless pen provides the full functions of a mouse (including the hover function crucial to many applications).

Specifications:

Transmission Interface:

IEEE802.15.4

Working Principle:

Electromagnetic induction

Data-signaling Rate:

57600 baud rate

Working Temperature:

-20°C ~ +55°C

Resolution:

100 Lines/mm

Read speed:

180pps

LCD Display:

128*64 (Back Light)

Voltage:

3.6V Ni-Mh Rechargeable

Electricity:

110mA

Active Area:

304.5mm * 230.5mm

Dimensions:

370.0mm * 320.0mm

Weight:

980g (including battery)

Accessories:

Software

Dongle

Electronic pen
